

Welcome to the neighborhood!

Congrats on your move! We wanted to take the opportunity to draw your attention to some helpful tips that are good for your wallet, your lawn, and beyond.

.....

Billing

WaterOne bills are sent once every other month, so your bill will reflect two months of water usage. Commercial customers are billed monthly.

SIGN UP: waterone.org/payment

WaterOne does not handle wastewater. For questions about wastewater billing, contact the department responsible for wastewater in your area.

- Johnson County Wastewater 913/715-8590
- Olathe Wastewater 913/971-9311
- Spring Hill 913/247-3521

Sprinkler Tips

New to the Midwest? Is this the first time you've had a sprinkler system or the first time you're laying sod or seeding? Some customers have questions about what kind of water usage to expect, especially if outdoor watering is new for them. Give us a call as you consider your outdoor landscaping options. We may be able to provide important information on estimated water usage looking at the property's past

Helpful Tips

- Winterizing your sprinkler system prevents leaks and surprise high bills while also extending your system's lifespan.
- A power outage can reset your sprinkler box to factory settings. Be sure to check your system after an outage to ensure it's running on schedule.
- An average zone can put out **14 gallons of water!**
- Watch tutorials on various sprinkler systems on our website.

Leaks

Leaks on your internal plumbing system, outdoor sprinkler, and service line aren't always obvious and can lead to substantial water bills. Many leaks are simple fixes, while others may require assistance from a plumber. Toilets are the most common culprits for creating high bills. **Leaks in toilets can waste up to 1,400 to 2,800 gallons of water per day** depending on the age of the toilet and severity of the leak. Learn more tips on how to spot and prevent links on our website.

Preventing Frozen Pipes

Preparing your home for winter is an important task. Interior water pipes are the homeowner's responsibility, so by taking a few precautions you can save your home from extensive water damage and a high water bill.

Before the cold weather hits:

- Know the location of your main water shut-off valve in case of emergency
- Disconnect outdoor water hoses
- Winterize your sprinkler system
- Insulate any exposed water pipes

When temperatures drop below 23 degrees:

- Drip a faucet farthest from your main water shut-off valve
- Open cabinet doors to allow warm air to circulate under your sinks
- Keep your thermostat above 65 degrees
